

INCORPORATING TECHNOLOGY IN TEACHING - TABLE GROUP Activity

[Technology Jam](#)

The Learning Context

Imagine you are working in a general education course on **Subject X** (you can decide the subject) which meets in person twice a week in a lecture-style classroom. It is a relatively large classroom (~75 students) and is an introductory course for non-majors. Looking at the class roster, there are a variety of majors represented in the course.

I. TASK

The **Learning Objective:** What skill/knowledge would you like to see in your students?

Describe **ONE** of the most misunderstood concepts in [in on of your group member's discipline or field].

*REMEMBER: A learning objective is a statement of: 1) what the learner is to learn; 2) what the learner will be able to do as a result of the learning process; 3) the end result of the learning process.

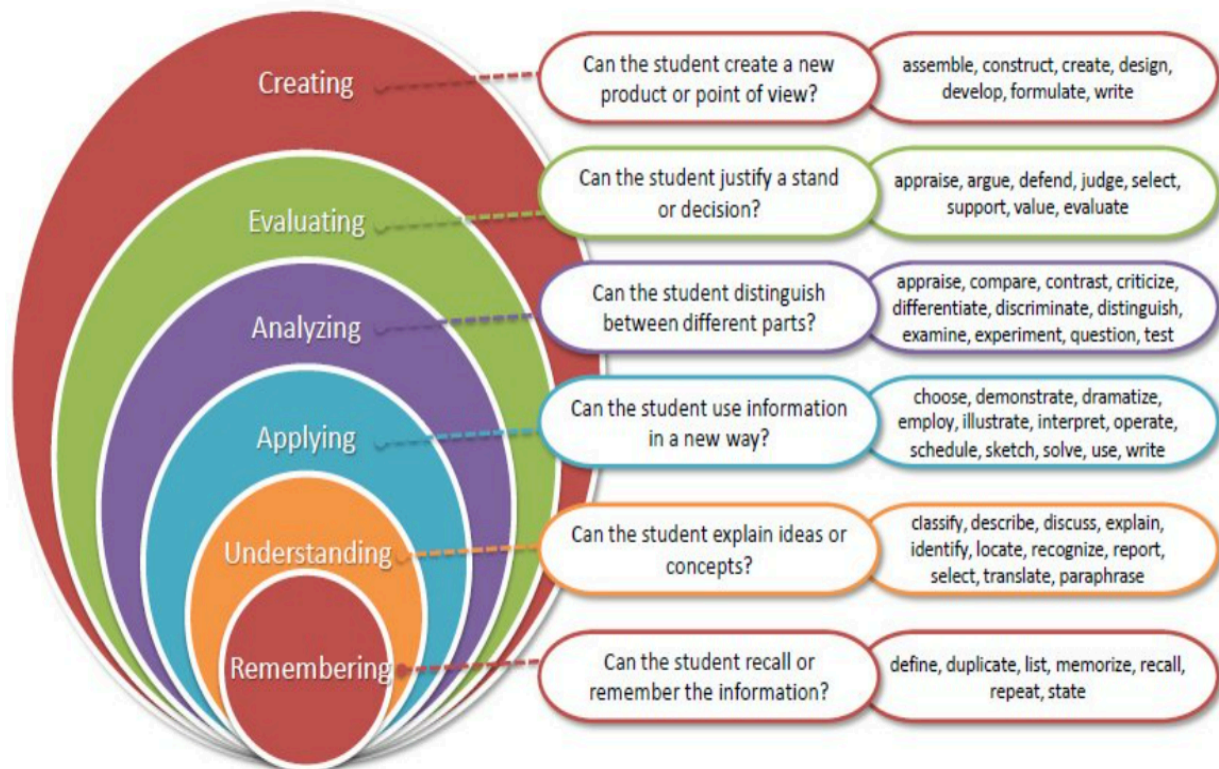

Use a Bloom's word for writing a measurable learning outcome (see page 2) *

II. TASK CONTINUED

1. Read the information provided above specifying the Learning Context and the Learning Objective. Make sure within your group that you understand **what the learning objective is** aiming for and understand the implications of the learning context.

2. **Choose a technology to work with** that will help you (as instructors in this scenario) work towards that learning objective within your given learning context.
3. Design a learning activity that utilizes your chosen technology to meet the given learning objective and context. **USE THIS SIDE OF THE DOCUMENT TO TAKE NOTES.**
4. You will later be sharing your notes from this document, so make sure to document your design.

Bloom's Taxonomy (Revised)

III. REFLECTION

1. Why do you think this tool is appropriate to use for achieving your learning objective?
2. What specific ways do you imagine using this technology to meet the learning objective?

3. How do you know/asses that this technology will accomplish the learning objective?
